

PEP

is an emergency treatment that prevents HIV infection after a possible exposure to HIV

PEP IS NOT EFFECTIVE AGAINST OTHER STIS!

(Sexually transmitted infections)

THE EARLIER THE TREATMENT STARTS, THE MORE EFFECTIVE IT IS!

PEP

= EMERGENCY TREATMENT AFTER A POSSIBLE EXPOSURE TO HIV

Post exposure prophylaxis

PEP SHOULD BE STARTED WITHIN THE FIRST 24 HOURS

Beyond 48 hours, its effectiveness decreases, and from 72 hours onwards, it will no longer be prescribed.

PEP IS AVAILABLE 24/7

at "Service National des Maladies Infectieuses" of the CHL and in all emergency services across the country!

You should directly go to the 2nd floor, to Unit 20 for infectious diseases at the CHL to avoid wasting time in the emergency departments
