

PREP

is a preventive treatment taken by HIV-negative individuals (people who do not have HIV) before a risky situation to prevent HIV infection. It is recommended for individuals who have repeated high-risk exposure to HIV through unprotected sexual intercourse.

PREP DOES NOT PROTECT AGAINST OTHER STIS

PREP ONLY REDUCES THE RISK OF CONTRACTING HIV!

THE DOSING PROTOCOL MAY VARY ACCORDING TO THE INDIVIDUAL'S NEEDS AND IS DEFINED WITH THE PRESCRIBING DOCTOR.

PREP is covered by the CNS, and medical consultations are also reimbursed by the CNS.

IN LUXEMBOURG, PREP IS AVAILABLE ONLY WITH A MEDICAL PRESCRIPTION FROM THE "SERVICE NATIONAL DES MALADIES INFECTIEUSES" OF THE CHL.

THERE ARE TWO WAYS TO TAKE PREP:

DAILY:

which means taking 1 tablet daily at the same time.

EVENT BASED DOSING:

which means taking 2 pills 2 hours before the risky situation, then 1 pill 24 hours and 48 hours after the first intake.
